

# pool coping template

Pool coping can be made to any size or specification to suit your needs

Templates can be made from builders plastic, plywood, masonite or even cardboard

All relevant information should be marked including the bullnose sides, overhang of bullnose over the pool edge and numbered pieces

All our paving products are hand crafted. This is a typical mould ready to be poured

As one can appreciate, setting up takes quite some time and it is important for us to get it right the first time

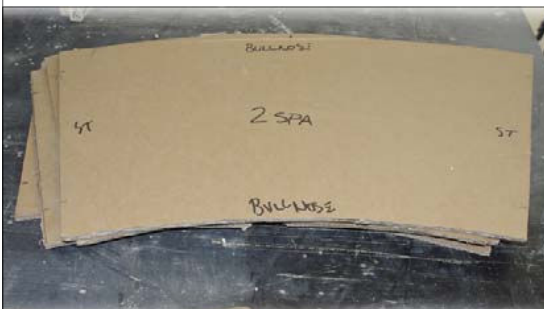

This process can be easily completed with the supplied templates highlighted below.

These are ideal template samples for us to work with

By numbering each piece of the template, the product will be returned to you with the piece number on the back

You should also supply an overall view of the pool with your templates (plan and / or photo)

Pool coping templates should be mailed to Maison. Include a copy of your order from Provincial for identification purposes.

Alternatively, drop your template in to Provincial and we will arrange postage for you
