

# provincial projects

Provincial provides ecologically sensitive restoration and beautification solutions for residential, commercial, urban, rural and coastal landscapes. We create and remodel beautiful and appropriate water sensitive environments, restore degraded environments back to health and provide distinctive plants, garden décor and paving products that enhance our outdoor spaces

Provincial has been conserving, restoring and beautifying our natural, public and private environments since 2001

We've grown several million plants and planted at hundreds of sites around NSW, VIC and the ACT, in a myriad of residential, commercial, urban, rural, wetland and coastal landscapes. We specialise in beautiful, easy care, water wise landscapes

Our sun and frost hardened native plants grown in chemical free outdoor spaces have been used for a variety of projects ranging from horticultural production to revegetation, construction site rehabilitation, wetlands and grassland establishment, pasture improvement, residential, commercial and urban landscaping

Provincial supplies many councils and government departments, environmental agencies, landscape architects and garden designers, interior designers and architects, landscapers and gardeners, developers, builders and construction companies, other nurseries and the general public with native plants, decorative pots and pavers, 'green' landscape design services, planting and project management services - your complete eco landscape solution under the one roof

The following projects are indicative of our capability to undertake plant supply, revegetation and landscaping projects of any scale. Visit our website [www.plantsandlandscapes.com.au](http://www.plantsandlandscapes.com.au) for images and project details

## urban + coastal landscapes (xeriscapes) easy care, water wise landscaping

Australian National University John Curtin Medical Centre
