

Dianella lithe™

a graceful and elegant specimen for larger gardens

Lithe™ is soft, flowing and gentle on the eye. Absolutely ideal for softening hard edges, back of border plantings, along fence lines and making strong distinctions between outdoor spaces

Dianella caerulea lithe creates movement, is lively, enduring and flexible. It has wavelike, cascading and verdant foliage which belie its structural qualities. Summery and striking magenta flowers give way to frosted duck blue berries in autumn

Dianella lithe was developed as part of 'The Provincial Collection' by Provincial Plants and Landscapes, Australia's NGIA Hall of Fame + National Environment Award Winners

description	Cascades of strappy leaves, hardy and long lived
maintenance	Remove thatch to promote new growth. Water every 4 weeks in arid conditions
care	Water as needed for first 2 - 3 months until established. Best results in mulched gardens. Apply slow release fertiliser once a year in spring
tolerates	Light frost, moderate drought conditions
flowering	Spring through to summer
flower colour	Vibrant display of magenta flowers that transition light mauve followed by blue berries
position	Performs well in both full sun and shady environments in most soil conditions
height x width	120cm x 60cm in full sun
spacing	70cm apart for mass planting. 90cm apart for specimen planting
uses	Back of border, softens hard edges, mass plantings, creates excellent flowing movement in the garden

creates movement and softens hard edges

bred to soften

Dianella lithe™
