

plant type

- native rushes / strappy leaf plants
- wetland plants

water hardiness

Baumea rubiginosa

soft twig rush

Rhizomatous perennial. Compressed ribbon like green leaves. Inflorescence reddish brown clusters of spikelets.

project type

urban and commercial
residential
wetland

ecosystem type

coastal
coastal hinterland
wetland

soil type and drainage

light - sandy soils
medium - loamy soils
heavy - clay soils
poor drainage

origin	All Australian states and territories.
cultural notes	Naturally occurs in swampy areas with low nutrient soils. Full sun or part shade.
maintenance	Requires regular water.
tolerates	Tolerant of frosts, inundation, low nutrient soils, poor water quality.
flowering season	Can flower year round.
flower colour	Dense flower spikes of reddish brown flowers.
foliage colour	Bright green leaves often orange-brown towards the tips.
width	up to 0.5m
height	up to 1m
water depth	aquatic to 0.25m
plant spacing	20cm apart
recommended uses	Useful for wetland revegetation.
