

Gleditsia Triacanthos 'Shademaster'

Shademaster Honey Locust

A medium-sized deciduous tree that's fast-growing and takes an oval shape with ascending branches and slightly weeping foliage. Known as the 'shademaster' due to its abundant shade production, often being found in large gardens and parkland.

Origin	Southern, North America.
Size	Up to 11 metres high, Up to 8 metres wide.
Cultural Notes	Full sun is preferred. Water in well when planting and keep the soil moist until the tree becomes established. This tree is susceptible to wind damage, so plant in protected areas.
Tolerates	Tolerant of some drought and wetter conditions. Tolerant of pollution.
Flowers / Flowering Season	Insignificant green-white flowers appear in springs, brown legume fruits are produced after. Flowers in springtime.
Foliage Colour or Type	Foliage is dark green and bipinnate in shape. Leaves turn bright yellow through autumn, not falling until later in the season.
Soil Type	Well-draining moist soil preferred. Can grow in most types of soil. pH can be slightly acidic.
Suited to	Great shade maker, perfect for a larger garden or parklands.
