

Jacaranda mimosifolia

Jacaranda

The Jacaranda is a beautiful medium-sized deciduous tree with ascending branches, known for its purple flowing bloom in the summertime. Through winter the foliage will turn yellow before falling.

Origin	South America.
Size	Up to 15 metres high, Up to 9 metres wide.
Cultural Notes	Prefers full sun, is somewhat drought tolerant and can handle periods of wet weather. It grows well in warmer climates as it does not do well in frost or freezing temperatures.
Tolerates	Can tolerate periods of drought.
Flowers / Flowering Season	A stunning purple bloom in summer. The flowers appear in clusters of bell-shaped pods encompassing the tree.
Foliage Colour or Type	Foliage is green and fern-like, growing up to 20 inches in length. Depending on the climate, this tree can be semi-evergreen or deciduous.
Soil Type	Neutral to acidic soil. Sandy, well-draining soil is preferred.
Suited to	Because of its beautiful purple bloom, this is an ideal feature tree. Great for a larger garden or streetscape or avenue.
