

# Juglans Hindsii

Walnut

A deciduous medium-sized tree growing up to 15 metres, will often branch out creating a wide canopy that sometimes spans larger than the height of the tree itself. The trunk is often very thick, reaching up to 1.8 metres in diameter. The foliage has a feather-like appearance with a shade of dark green to light yellow or golden green.

Origin	California, Northern America.
Size	Up to 15 metres high, Up to 15 metres wide.
Cultural Notes	Prefers full sun, avoid shade when planting this tree. This tree grows deep roots so prefers ample permeable soil.
Tolerates	Tolerates a variety of soils and pH levels. Through enjoying moist soil, can tolerate drought.
Flowers / Flowering Season	White and green, flowers in spring. This tree is monoecious, meaning both sexes of flowers can be found on the same plant. Produces a nut with a hard outer shell.
Foliage Colour or Type	Foliage colour spans from deep green to light golden-green or yellow-green, in a pinnately compound, meaning the leaves resemble the shape of a feather.
Soil Type	Will tolerate clay and sandy soils. Varying pH can be tolerated, prefers well-draining soils
Suited to	Fantastic for shade coverage due to its wide canopy. Suitable for larger gardens or parkland.
